K E N T

AND

FOR THE YEAR 1960

BOROUGH OF TENTERDEN (KENT)

Annual Reports of the Medical Officer of Health
and of the Chief Public Health Inspector for the
Year 1960

Mr. Mayor, Aldermen and Councillors,

I have the honour to present to you my Annual Report for the year 1960.

Home Population

The Registrar General's estimate of the mid-year Home Population was 4,930 which represents an increase of 110 over that of the previous year.

Births and Birth Rate

The number of live births was 59, one less than that of the previous year and the corresponding crude birth rate was 11.97, which after adjustment by the Registrar General's Comparability Factor to allow comparison with the birth-rate of other Districts, becomes 12.21 and was considerably lower than that of 17.1 for England and Wales.

Stillbirths and Rate

One male stillbirth was registered and the rate was accordingly 16.67, which was lower than that of 19.7 for England and Wales.

Infant Deaths and Mortality Rate

Two infant deaths were registered and were due to:-

- (1) (a) Atelectasis - 2 days
(b) Extreme Prematurity
- (2) (a) Hydrocephalus - one month
(b) Large lumbar meningocele

Both deaths were unavoidable having been due to congenital causes.

The Infantile Mortality Rate was therefore 33.90 and was higher than that of 21.7 for England and Wales but all the figures given above are too small for valid statistical comparisons.

Total Deaths and Rate

The total number of deaths from all causes was 118 (54 M. 64 F.) and the crude death rate was accordingly 23.94; this high-crude death rate is due to the higher mortality in West View Chronic Sick Hospital from which deaths are assigned to the District when the patient has been an in-patient for more than six months. The rate after adjustment by the Registrar General's Comparability Factor which is computed from a population standardised for age and sex distribution becomes reduced to 13.17 and was higher than that of 11.5 for England and Wales.

The chief group cause of deaths was Heart and Circulatory Diseases and Vascular Lesions of the Nervous System, which are the ultimate natural causes of death amongst the aged; of these there were 75 deaths.

Disease of the Coronary Artery of the Heart is however an exception as it is the cause of many deaths in middle age. There were 17 of those deaths compared with 6 in the previous year. The ages at death ranged from 50 to 84 years, and 5 or 29% were under 60 years. Intensive research is being devoted to its causation which is still obscure, although there

are reasonable theories that the excessive consumption of food particularly of the sophisticated or artificial kind, aggravated by inadequate exercise, and prolonged nervous tension associated with excessive smoking are contributory or primary causative factors.

Cancer has for many years been the second highest cause of deaths of which there were 16, the same number as in the previous year. The majority of the patients were aged or senile, and having regard to the latent or insidious nature of the disease, procrastination in consulting their Practitioners is the most common factor associated with late diagnosis when the disease is too advanced for other than palliative treatment.

Cancer of the Lung caused 7 of those deaths, significantly all males as were the 6 deaths in the previous year. None occurred in West View Chronic Sick Hospital. The ages at death ranged from 56 to 78 years and 4 or 57% of those were under 60 years of age. Like Coronary Thrombosis, Cancer of the Lung causes many deaths in middle age, and it is difficult to ignore the theory that the inhalation of tobacco smoke over many years, particularly in excess, is a precipitating factor.

There was no death caused by the Infectious Diseases, and the other causes of death were miscellaneous.

Infectious Diseases

Throughout the year the number notified was few.

Whooping Cough

Only eight cases were notified. More and more children are being vaccinated each year against this distressing illness at the Child Welfare Centre or by their family Practitioners and it would seem that a barrier is being created against local epidemics of the disease.

Measles

Only four cases were notified. It is however, an endemic infection amongst children and outbreaks usually occur every second year when a sufficient number of susceptible children has aggregated.

Broncho-pneumonia, Acute Otitis Media and Acute Encephalitis in this order of frequency are comparatively rare but it would seem that Acute Encephalitis has been becoming more frequent within the past decade, of which a minority are fatal.

Poliomyelitis, Diphtheria, Food Poisoning and other Notifiable Diseases.

None of these was notified.

The immunisation campaign against Diphtheria has proved an unqualified success, and the absence of cases of Poliomyelitis may also be imputed to the vaccination scheme initiated in 1956/57.

Tuberculosis

Only one new case of Respiratory Tuberculosis was notified - in the 25 - 34 year age group. The notifications prior to circa 1950 involved chiefly the teen-age or adolescent age-group and it is very favourable that this group is now the least affected, probably partly due to improved natural resistance, partly to B.C.G. vaccination which is offered to school-leavers, and partly to the increasing ascertainment and successful treatment of open infective cases; also Sanatorium beds are now immediately available for patients.

The Mass Radiography Service visited the District in November/December 1960, and discovered four active cases of Respiratory Tuberculosis, and two

cases of Lung Cancer. This Service is of great value in the ascertainment of active cases who would have been a source of infection to others, and also in making it possible for these patients to have early treatment.

There were no new cases of Non-Respiratory Tuberculosis which is a general index of the safety of the milk supplies from the contagion of the Bovine Bacillus which has in former years caused innumerable deaths, disabilities and deformities.

Also there were no deaths from either Respiratory or Non-Respiratory Tuberculosis, which may be regarded as a reflection of the efficacy of modern treatment.

In conclusion, I wish to take this opportunity of thanking you for your support and interest in the Department and the staff for their efficiency and co-operation.

I am,

Your obedient Servant,

J. MARSHALL

M.B., Ch.B., D.P.H.

Central Public Health Officer,
14, Church Road,
Ashford,
Kent.

SECTION A.

STATISTICAL AND SOCIAL CONDITIONS OF THE DISTRICT

FOR 1960

Area:- 8,946 acres

Registrar-General's Estimate of:-

The Resident Population	4,930
Number of Inhabited Houses According to the Rate Books	1,725
Rateable Value	£69,226
Sum Represented by a Penny Rate	£275

SOCIAL CONDITIONS

Tenterden Borough is a corporate member of the Cinque Ports as a Limb of the Ancient Town of Rye, and as such has retained its identity, its historical traditions and characteristic charm.

The Borough is largely a residential district, but being surrounded by wide rural areas affords a convenient and good shopping centre. Its chief business interests are associated with those of agriculture, as being the main industry.

SUPERVISION OF HOP-PICKERS CAMPS

Number of camps usually occupied:- 4

All huts are cleaned, whitewashed and supplied with clean straw mattresses. Adequate piped water supply and W.C. accommodation.

Estimated number of occupants:- Not exceeding 250.

7. HOLIDAY CAMPS AND CARAVAN SITES

There are no holiday camps or caravan sites in the Borough.

8. CESSPOOL EMPTYING

This is carried out by a private firm operating in the area.

9. DRAINAGE

Total number of inhabited houses (including Flats) is	1,527
Total number of houses connected to the sewers	1,249
Number of houses not connected to the sewers	278
Number of premises connected to cesspools	200
Number of premises with pail closets	20

10. REFUSE COLLECTIONS AND DISPOSAL

A weekly collection is at present made throughout the built up part of the district and a monthly collection in outlying parts - this it is hoped will be improved upon in the near future.

11. DISINFECTION

This is satisfactorily dealt with as required by the Council's staff.

12. DISINFESTATION

The number of houses found to be infested with vermin was as follows:-

	<u>Flies</u>	<u>Fleas</u>	<u>Cockroaches</u>
Council houses	-	1	-
Other houses	-	-	-

13. FACTORIES ACT, 1937 to 1959

1. Inspections for purposes of provision as to health (including inspection made by Public Health Inspector).
